# EasyPayment ING, what is it?

EasyPayment is an "EFT" based payment solution that uses QR code to transmit the needed data to proceed with the payment using a mobile app.

It consists of two major parts or entities:

1. The desktop/Tablet interface, for Shop Keepers.
2. The Smartphone App, for the customers.

## How does it work?

Stage 1: Menu selection, bill calculation, QR code generation.

Stage 2: Showing the QR code to the customer, and asking him to scan it.

Stage 3: Checking the data and bill by the customer and confirming the payment.

## Problems?
